

Figure 1. pH-dependent Adherence of Urease to Gastric Mucus and Mucin

Coating of plates with *H. pylori* urease

Blocking with 3% bovine serum albumin

Biotinylated porcine gastric mucin and
test inhibitor mixture (pH 4.0)

Washing 5 times (pH 4.0)

Heat-fixation at 65°C for 10 min.

Streptavidin-horseradish peroxidase
conjugate used as biotin probe (pH 7.0)

Figure 2. Procedure for Competitive
Adherence Inhibition Assay
